

PAM POSITIVE INPUT FLAT DRY UNIT

PAM Positive Input Ventilation uses air displacement to ventilate a whole dwelling, thereby improving indoor air quality and stopping or preventing condensation problems from occurring. Predominantly designed for installation in existing properties, the PAM Positive Input Flatdry Unit is very easy to install.

A single fan unit mounted on the wall of a property without a loft supplies fresh, filtered air into the dwelling. This creates a slight positive air pressure which forces stale, vapour-laden air out via fortuitous air gaps or through humidity sensitive window vents.

- Ideal for basements or flats
- Extract rate of 55 litres per second on fast speed or 44 litres per second on slow speed.
- British made
- 2 year, no quibble guarantee
